DETAILED ACTION

Priority

1. Acknowledgement is made of Applicant's claim for priority under 35 U.S.C. 365(a)

Response to Arguments

2. Applicant's arguments, see page 16 of Applicant's Remarks, filed 12/28/09, with respect to the objection of claim 12 have been fully considered and are persuasive. The objection of the claim has been withdrawn since previous issues have been corrected for.
3. Applicant's arguments, see page 16 of Applicant's Remarks, filed 12/28/09, with respect to the 35 USC 101 rejection of claims 1, 3-18 and 31-39 have been fully considered and are persuasive. The 35 USC 101 rejection of these claims has been withdrawn since at least the "displaying" step is tied to, via being accomplished by another statutory category as the "subpixel-addressable screen" is explicitly recited as comprised within an image displaying device, in the preamble of the claim.
4. Applicant's arguments, see page 16 of Applicant's Remarks, filed 12/28/09, with respect to the 35 USC 112 rejection of claims 3-8 have been fully considered and are persuasive. The 35 USC 112 rejection of these claims has been withdrawn.
5. Note, an updated prior art search has yielded no further applicable, as per prior art rejection purposes, results. Therefore, the outstanding issues of some of the claims have been resolved thus placing the claims in condition for allowance.

Allowable Subject Matter

6. Claims 1, 3-18 and 29-39 are allowed.

The following is an examiner's statement of reasons for allowance:

In reference to claims 1, 4 and 29, the prior art of record does not explicitly disclose a method or computer system performing down-scaling and a subpixel optimized processing involving, representing the scaled image causing the luminosity associated with each subpixel within a given pixel of the scaled image to represent the luminosity of the subpixel's color in a portion of the corresponding source image that differs for each subpixel as a function of the subpixel's different position in the given pixel, whereby the pixels represent strings of displayable text characters that are antialiased font bitmaps, and wherein the function is based upon a coverage value representing the percent of the subpixel's area covered by the font shape and a color balancing distribution between a subpixel's coverage value and coverage values of other nearby subpixels that reduces color imbalances, in combination with the further limitations of claims 1, 4 and 29 respectively.

In reference to claims 3, 5-18, 30 and 31, these claims depend upon allowable claims 1, 4 and 29 and are therefore also deemed allowable.

In reference to claims 32 and 35, the prior art of record does not explicitly disclose a method performing down-scaling and a subpixel optimized processing involving, representing the scaled image causing the luminosity associated with each subpixel within a given pixel of the scaled image to represent the luminosity of the subpixel's color in a portion of the corresponding source image that differs for each subpixel as a function of the subpixel's different position in the

given pixel, the positions determined by windows within the image and coverage lines within the windows, in combination with the further limitations of claims 32 and 35 respectively.

In reference to claims 33, 34 and 36-39, these claims depend upon allowable claims 32 and 35 and are therefore also deemed allowable.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
